

Electronics & Electrical Components Industry

The Electronics & Electrical Components Industry (EECI) can be considered as one of the main pillars of the Slovak economy. Current situation on the market reflects both — traditional electronics manufacturing (power generators, telephones, radios, etc.) and new trends especially connected to the growing automotive industry in Slovakia (electric motors, microelectronics, sensors).

Highly qualified and affordable workforce with a strong focus on technical fields, established cooperation between companies and domestic universities and attractive support mechanisms for R&D motivate companies to establish their R&D divisions in Slovakia. Osram, Leoni, Enics, Microstep and Vaillant are just few examples of EECI companies with strong R&D presence in Slovakia.

SARIO constantly monitors the development in selected industries and prepares overviews in English.

Electronics & Electrical Components Industry in SLOVAKIA
