

ICT

ICT, as one of the younger sectors of the Slovak economy, is building on a long tradition of other technical fields in Slovakia. Thanks to the highest ability to adapt to new ICT technologies in the region (Global Competitiveness Report), the Slovak labour force has a strong predisposition to work with and develop newest software solutions.

Slovakia offers a number of comparative advantages to foreign investors in the ICT industry, such as availability of qualified, multilingual workforce with strong IT skills, well-established cooperation with the Slovak universities or cooperation within local IT clusters.

The great innovation potential of the ICT workforce is evident in the global success of the Slovak IT companies such as Eset or Sygic.

SARIO constantly monitors the development in selected industries and prepares overviews in English.

Information & Communications Technology Sector in **SLOVAKIA**
