

Tomas GUGH

CIO, Matador Group

At MATADOR HOLDING, I primarily manage innovation and help set up the process of innovation inside our companies that identifies strategies, business opportunities and new technologies and then develops new capabilities and architectures with partners, new business models and new industry structures to serve those opportunities.

I am currently responsible for the „MH2“ project, a hydrogen concept car.

I studied and worked as an R&D engineer in Germany. Whether at university, in engineering companies or directly at OEMs. My goal is to use this experience to help improve the quality of research and development in Slovakia.
